***Trainer: Nilesh Ghule***

# Python Flask REST api - JWT auth.

- ① consistent api response
  - ② standard error handling
  - ③ REST apis - CRUD ops
  - ④ password encryption & user signup/signin
  - ⑤ jwt auth.
  - ⑥ routers/blueprints
- success → `{ "status": "success",  
"data": ... }`
- failed → `{ "status": "error",  
"error": "error" }`
- `@app.errorhandler(500)`  
↳ standard error response

REST protocol is stateless.

Each req must be self contained.

- req body (required data).
- + user authentication.

*Thank you!*
